SUMMARY

Computer Science Engineering student with skills in Python, SQL and Web Development. showcasing problem solving and teamwork abilities. Actively seeking an internship or Entry Level Software Engineer position to gain industry exposure and contribute to innovative projects.

EDUCATION

Rishi MS Institute of Engineering & Technology for Women, Hyderabad	2022-2026
<i>B. Tech Computer Science and Engineering</i>	<i>CGPA: 8.0</i>
Sri Chaitanya Junior kalasala, Hyderabad	2020-2022
<i>Board of Intermediate Education, Telangana</i>	<i>Percentage: 96.9</i>
Sri Chaitanya School, Hyderabad	2020
<i>Board of Secondary Education, Telangana</i>	<i>CGPA: 10.0</i>

TECHNICAL SKILLS

Programming: Python, SQL

Web Development: HTML, CSS, Bootstrap, JavaScript

Databases & Tools: MYSQL

Libraries & Frameworks: Pandas, NumPy, Matplotlib

AI & ML: Machine Learning Basics

Concepts: DSA, OOPS, DBMS, OS, CN

PROJECTS

AI-Based Assistive Navigation System – EchoVision (March 2026):

- Developed an AI-powered assistive navigation application leveraging computer vision and deep learning techniques to support visually impaired users in real-time navigation. Implemented object detection using YOLO and EfficientDet models optimized with TensorFlow Lite for efficient on-device processing and offline functionality. Designed Directional Zoning and Proximity Scaling algorithms to deliver accurate audio and haptic feedback based on object location and distance. Integrated voice commands, GPS-based navigation, and emergency alert features to enhance user safety, mobility, and independence while ensuring seamless real-time performance across diverse environments.

Eye Ball Cursor Movement using OpenCV (June 2025):

- Developed an advanced eye-tracking system leveraging computer vision and Mediapipe Face Mesh to enable to handle-free interaction with a computer implemented functionalities including cursor control based on iris position, wink-based left, right clicks, blink triggered screenshots, tab closure detection, and scroll control through vertical eye movement. Ensured seamless user experience by integrating real-time processing and notification mechanisms.

Disease Diagnosis & Medicine Recommendation System (April 2024):

- Developed a web-based disease prediction system using Python, machine learning, Streamlit and Random Forest Classifier, achieving an accuracy of **95%** in predicting diseases based on user-reported symptoms.
- Trained and validated the Random Forest model for disease prediction. Integrated health recommendations including medications, dietary guidelines, precautions, and disease descriptions, providing a pre-diagnostic assistant accessible to general users and remote patients.

CERTIFICATIONS

Python Fundamentals – Infosys Spring Board 

SQL (Basic) – Hacker Rank 

Web development – Nxtwave
